

## **#PeopleMakePetrofac**

Helen Fennell

I am really proud to work at Petrofac. The level of competency that we have throughout the organisation globally is by far the highest I've ever seen across all the companies I've worked in. I have wanted to be an engineer since I was 10. I was lucky that my physics teacher had been a mechanical engineer and she had worked on the design for Concord and my chemistry teacher was an industrial chemist and they introduced me to the idea of the practical application of science is really engineering. And I got to witness and experience sort of engineering early on.

The projects that are really exciting right now are the new Energies projects because those are the ones that are going to help solve the climate crisis.

There's often very little in terms of design standards and the technology is new and we're all finding our way, both the clients and ourselves as a contractor. And that is really exciting because we are working right on the cutting edge of what can be done and it does feel like it. We are really taking steps to make a big difference.

People definitely make Petrofac.
